The Jesan Companies

Restoration & Contractor Services You Can Rely On!

About Us

Jesan Construction is a multi-faceted construction services company that not only performs your routine construction projects, but we have also become the contractor to utilize for special "out of the box" or should we say specialty niche projects. Whether we are raising and suspending a three-story townhome to replace foundation and footings, removing air conditioners from a 31- story high rise building, replacing a raised patio over a parking garage, or dispatching an army of men and completing the restoration of 128 decks on nine scaffold drops in 90 days, Jesan is equipped to perform the most challenging projects. What separates Jesan Construction is our ability to perform 90% of all project work with our own employees without the utilization of subcontractors. Structural concrete, parking garage restoration, facade restoration, waterproofing, brick, stucco, EIFS, (Exterior Insulation Finishing System), exterior coatings, deck restoration, ASV stone installation, concrete sidewalks, and curbs are all performed by Jesan employees. Jesan Construction's in-house services also include the installation of Dura Dek, exterior drainage, and retaining wall(s). Roofing and siding are also part of our portfolio of services. Jesan is also the only company in the industry that possesses ownership with expertise in the construction and real estate management field for over 30 years. Having this knowledge allows Jesan to understand our clients and their daily challenges to effectively manage, facilitate and implement these construction projects with transparency to their constituents. Jesan construction is conveniently located in Newark, New Jersey, and is strategically set up to easily service New York and New Jersey."
